Project 2 Report

For this project, I started by watching the two lectures from 2016 and carefully reading the instructions on the modules tab. Even after going through them, I was still a bit unclear on some of the specific details of the assignment, so I made some assumptions and filled in the gaps as I went along. The biggest challenge I faced initially was selecting the right template for my website. I kept choosing templates that were too different compared to the structure I used in Project 1. Finally settling on a simple resume-style website built with Bootstrap. Once I had my template, I didn't 100% understand how to properly use CDNs, so I ultimately decided to download the HTML, CSS, and JavaScript files locally. After setting up a live server, I was able to start editing the template. I made a series of changes, including adjusting the colors, modifying the text, tweaking the formatting, and replacing the profile picture to better suit my project. However, one area where I ran into a bit of trouble was filling out the experience section of the website. Since I didn't have much real-world experience to include, I ended up exaggerating a bit to make the section look more complete. Overall, though, I didn't encounter any major technical issues once I had everything set up, and I was able to complete the project with a functional, customized website.
